NativeSquare

PREPARED FOR ROBERT WILSON PLUMBING

Your goal: 50 calls a day.

What we would do about it, and what to watch over the next five weeks.

Alex, NativeSquare
October 2026

WHAT I TOOK FROM OUR CALL

Where you are today.

Your business

27 years in plumbing and HVAC: commercial, residential and industrial.

About 80% of the work comes from insurance companies that send you the jobs.

5 or 6 vans on the road now. The plan is 10.

Housecall Pro runs the schedule. A secretary answers the phones.

What you want

More calls from homeowners and businesses who contact you directly.

Today 4 or 5 calls a day come in from Google, Facebook and other ads. The target is 50.

Already running: an ad team on Facebook, Google and SEO, monthly postcards, TV and sponsorships.

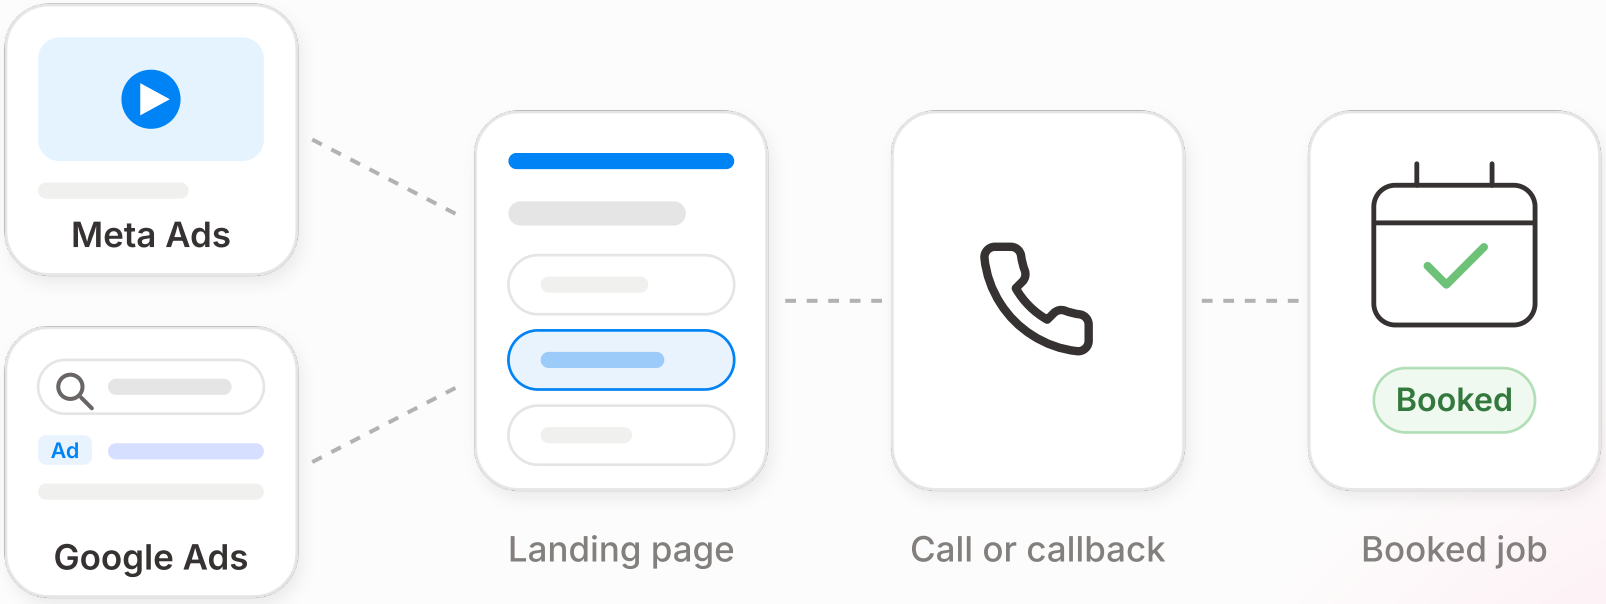

Your read: you close about 80% of the calls you get and miss few.

This page comes straight from our call. If something is off, tell me and I will correct it.

PART 1 · MORE CALLS

More calls, from channels we can measure.

We run Meta Ads and Google Ads. Each click lands on a page built to turn a visitor into a call or a lead. Every lead is tracked from the ad to the booked job, so you can see what each dollar brings.

TV and sponsorships build your name, but it is hard to tell which calls they bring. We focus on Meta and Google because every call they bring can be traced.

PART 1 · MORE CALLS

Ads made for you, at scale.

Our in-house specialist builds the creative: videos, images and copy, around your services and your service area. We make many versions of each, because the market shows us which one works.

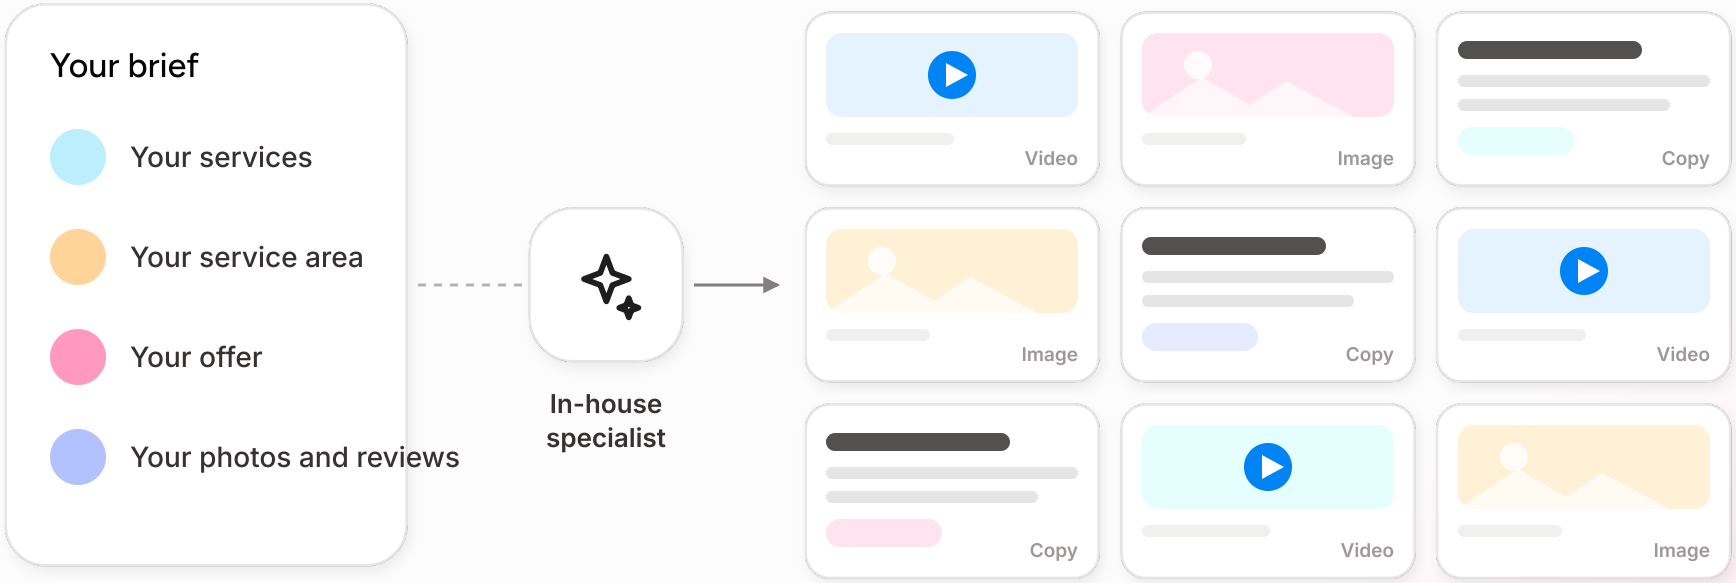

Illustration of the process. Every version is tested side by side.

PART 1 · MORE CALLS

The data decides where the money goes.

We read the numbers ad by ad: calls, cost per call and booked jobs. Budget moves to the ads that bring calls, and new versions replace the ones that do not. You get a monthly report.

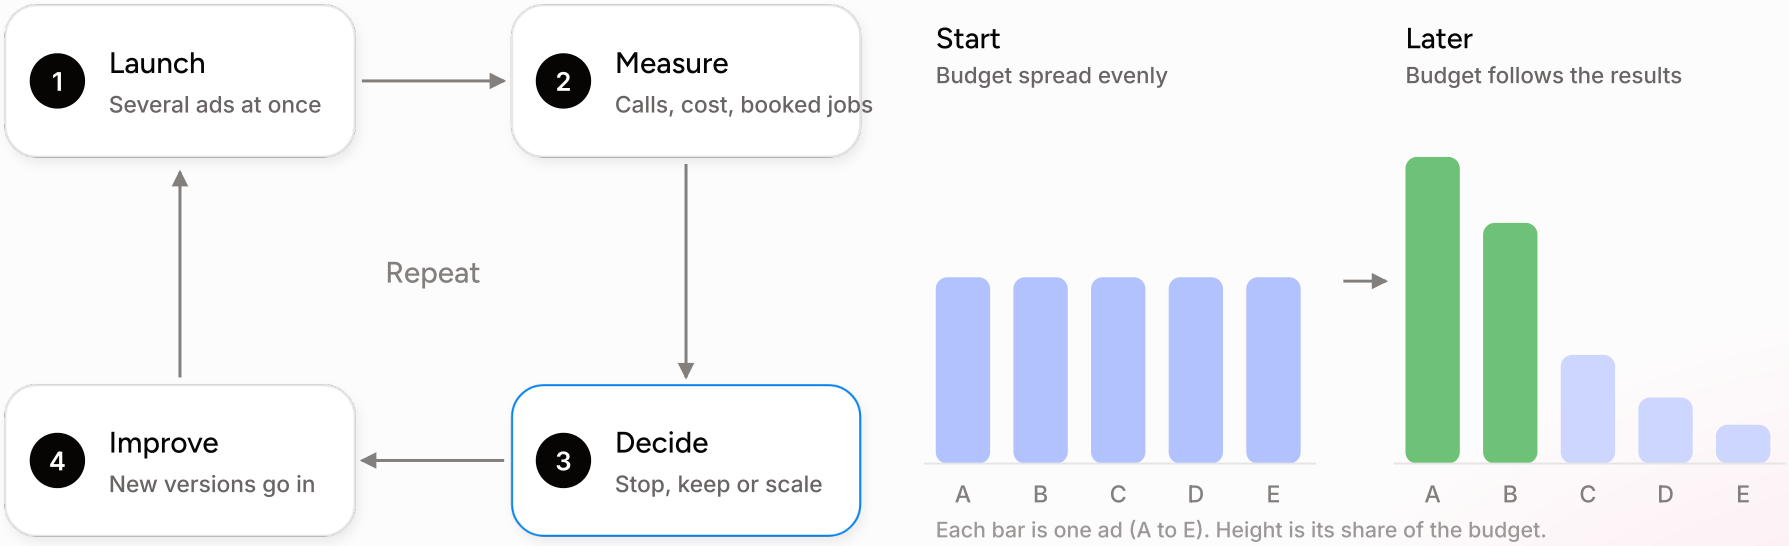

Illustration of the method, not real data.

PART 1 · MORE CALLS

We do not start from zero.

We compare your numbers with benchmarks for similar home service businesses, so we can tell quickly whether a result is good, weak or just early. We begin with ad formats and funnel pieces that we have already built and tested, then adapt them to your trade and your area.

How we judge your numbers

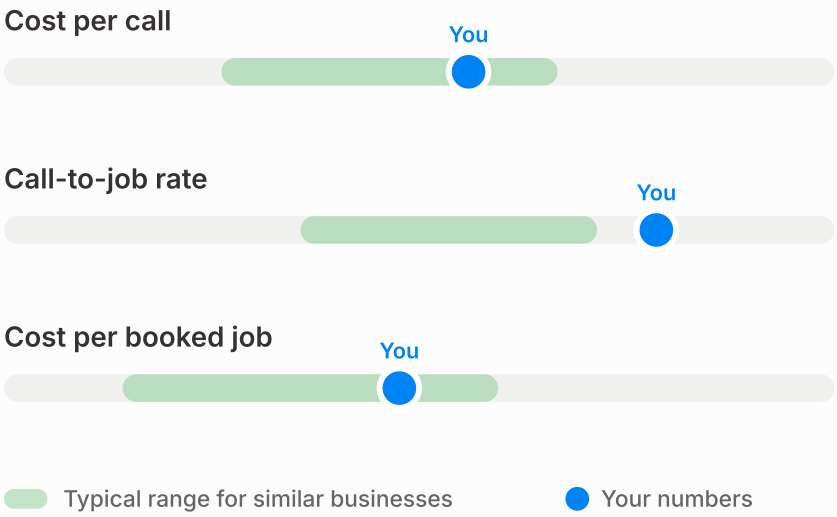

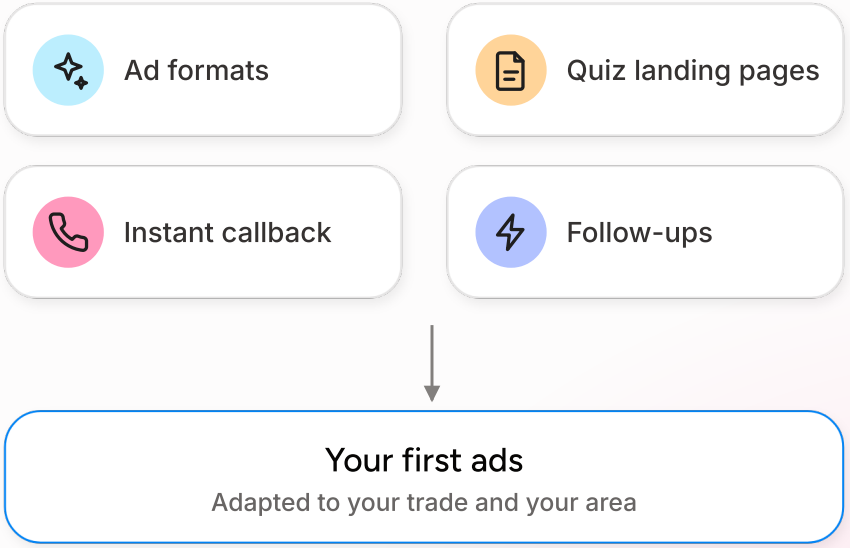

Illustration. Real ranges depend on your trade, your area and the season.

What we start from

PART 2 · KEEPING UP · FOR YOUR INFORMATION

At 50 calls a day, the phones have to keep up.

Today your secretary handles 4 or 5 calls a day. At 50, calls overlap, some arrive after hours, and some people fill in a form and never call. This part is about making sure none of them is lost.

AI receptionist

Answers every call, day and night, several at once. Handles the usual questions and books the job.

Instant callback

When someone fills in a form and does not call, the system calls them back in under a minute and books them.

Quotes and admin

Estimates and quote follow-ups go out automatically. Reminders and reports too, so nobody types them at 50 leads a day.

You told me you close most of the calls you get today. These keep it that way as the volume grows.

PART 2 · KEEPING UP

What stays the same.

We build around what you already run.

Your phone number

Calls still reach the number your customers already know.

Your secretary

She keeps the daytime calls. The AI takes the overflow and the after-hours calls.

Housecall Pro

Booked jobs land on the schedule your technicians already work from.

Your insurance work

It keeps flowing as it does today. This plan is about the customers who call you directly.

Before anything starts, we confirm exactly how each piece connects to Housecall Pro.

YOUR NEXT FIVE WEEKS

Let your new setup run. We look at it together after.

1

Now

Let the postcards and the new ad setup run. Nothing to change on your side.

2

Keep four numbers

Calls per day

Calls by source: Google, Facebook, postcards, TV

Calls missed or received after hours

Cost per call, by channel

3

Week 5

We talk again, with your numbers on the screen.

If more calls are the gap

The first step is a capped test on Meta and Google, with a budget you set.

If calls already overlap

We start with the phones: the AI receptionist and the instant callback.

NEXT STEP

Our next call.

Thirty minutes on video, about five weeks after our first call, with your numbers in front of us. By the end you will know whether we can help and what we would do first, or we part ways. Either is fine.

To set it up, reply to my email with two times that work for you.
